Prof Tashfeen
CS 2413: Website Development

Homework 1

Question 1. Make a simple HTML only personal website with three pages as demonstrated in class. While you may get started with the boilerplate bellow, I suggest that you type it out yourself.

```html
<!DOCTYPE html>
<html lang="en">
  <head>
    <meta charset="UTF-8" />
    <title>Hello, world!</title>
  </head>
  <body>
    <h1>Hello, world!</h1>
  </body>
</html>
```

1.1. Requirements

Note that *these are not mere suggestions*. If you don't fulfil the list bellow, you will possibly lose all the points.

1) You directory structure, directory names and filenames *must* match the following,

```
http://apollo.occc.edu/lastname/hw1
├── index.html
└── pages
    ├── about.html
    └── blog.html
```

2) You must use at least the following tags with the *appropriate* child/text contents. E. g., your title must include your lastname. For the professor this is `<title>Tashfeen</title>`.
   `<!DOCTYPE html>`, `<html>`, `<head>`, `<meta>`, `<title>`, `<body>`
   `<header>`, `<nav>`, `<ul>`, `<li>`, `<a>`, `<main>`, `<h?>`, `<p>`, `<footer>`.
3) Your text colour should be white on a black background.
4) All of your pages must properly link (be *anchored*) to each other, e. g., we must be able to navigate back to the homepage from either of the blog or the about page.
5) Your homepage (`index.html`) must include something current about you, something that makes you sound like an interesting person. I don't care if you are not an interesting person, come up with something.
6) Your blog page (`blog.html`) should include an excerpt from one of your favourite books/articles/-plays or newspaper.
7) Your about page (`about.html`) should give information about the website and you. This information is more formal, introduce yourself as you would to an employer. The information about your website can be how it was made, what software/libraries/languages were used.
8) All your html should be properly formatted and indented. I encourage your to figure out how to do this in your text editor, e. g., the package HTML-CSS-JS Prettify exists for the Sublime Text. As a hail-mary you may use one of the online HTML formatters.

1.2. Examples

See figure 1 for examples.

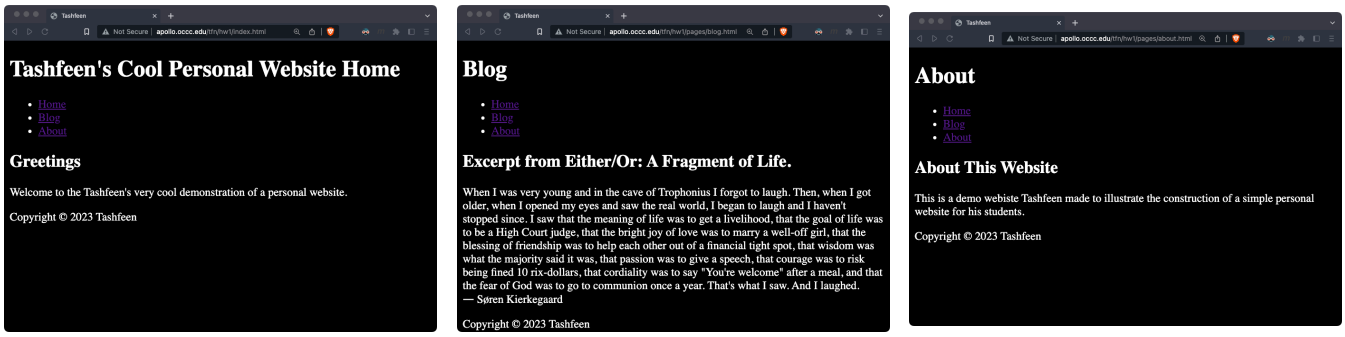

FIGURE 1. Example at http://apollo.occc.edu/tfn/hw1/index.html.

1.3. SUBMISSION INSTRUCTIONS

Submit a URL of the form `http://apollo.occc.edu/tfn/hw1/index.html`, after substituting your last name for `tfn`.

Your URL must open in a new tab. You will lose points otherwise. See the steps in figure 2.
