Prof. Tashfeen
CS 2413: Website Development

Homework 5

Question 1. Adapt your website for screens smaller than 750 pixels and create a new page with a dictionary form.

1.1. Requirements

These *are not mere suggestions*. If you don't fulfil the list bellow, you will possibly lose all the points.

1) Your directory structure, directory names and filenames[1] *must* match the following,

```
http://apollo.occc.edu/user0000/lastname/hw5
├── css
│   ├── animation.css
│   ├── dictionary.css
│   └── style.css
├── media
│   └── mario.png
├── pages
│   ├── about.html
│   ├── blog.html
│   └── dictionary.html
└── index.html
```

2) All applicable requirements from the previous assignments should be fulfilled.
3) When the reader's screen has less than 750 pixels of width, the aside tag of your blog page should shift to the bottom. Furthermore, the left margin on the aside tag should disappear in-place of a similar top margin. The width of the aside tag should be no more than 100% of its parent.

   We can apply conditional CSS rules using Media Queries. Bellow is an example of a media query that is applied to the body element when the maximum length of the screen is less than 750 pixels.

```css
@media only screen and (max-width: 750px) {
  body {
    border: 3px solid red;
  }
}
```

4) Point your web-browser to `http://apollo.occc.edu/tfn/dict?word=computer`. What do you see? Change the word after the equal sign `http://apollo.occc.edu/tfn/dict?word=[HERE]`, did anything change?
5) We'll be using the above Application's Public Interface (API) as the value of the HTML form tag/element's action attribute. Given bellow is the idiomatic code you'll be using in `dictionary.html`.

```html
<form action="http://apollo.occc.edu/tfn/dict" target="weather-frame">
  <label>
    <input type="text" name="word" autocomplete="off" placeholder="Enter a word, e. g., tea"/>
  </label>
</form>
<iframe name="weather-frame"></iframe>
```

6) You must use the form, label, input and the iframe HTML elements.
7) Apply any appropriate CSS styles (spelled out in `dictionary.css`) to the above elements to make the appearance of your `dictionary.html` match the examples given in section 1.2.
8) Advertise your dictionary page with a link pointing to it on your index page.
9) Your goal is to match the structure and aesthetic of your end result with the examples shown in section 1.2. The closer you get to the examples *mutatis mutandis*, the better grade you get.

[1] With a possible exception of the image file in media.

1.2. Examples

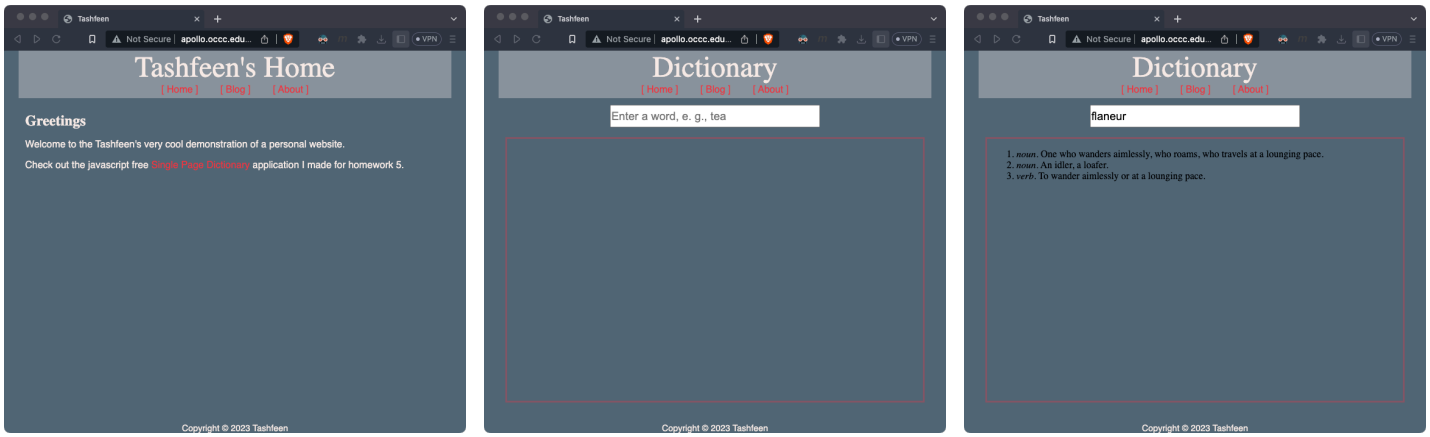

Figure 1. Index page with a link to the dictionary page: `http://apollo.occc.edu/tfn/hw5` and the dictionary page `http://apollo.occc.edu/tfn/hw5/pages/dictionary.html`.

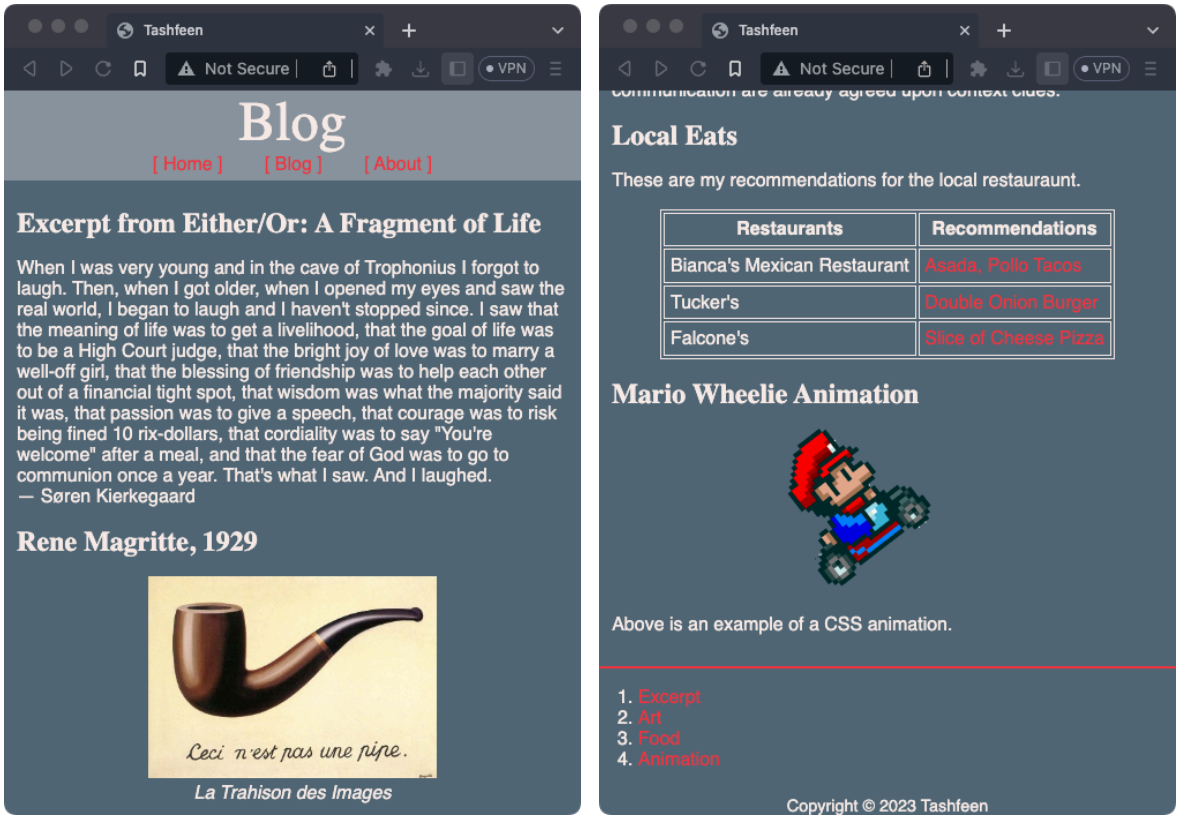

Figure 2. Media query in effect: `http://apollo.occc.edu/tfn/hw5/pages/blog.html`. Contract the browser window to less than 750 pixels wide.

1.3. Submission Instructions

Submit a URL of the form `http://apollo.occc.edu/user0000/lastname/hw5/pages/dictionary.html`, after appropriate substitutions. Your URL must open in a new tab. You will lose points otherwise. See submission instructions for homework 1 for help with submitting a link.
