CS 2413: Website Development

Homework 3

Question 1. Add an `<aside>` and a `<table>` to your blog from the last assignment.

You need to wrap your `<main>` and `<aside>` inside a `<div class="contents">` (division tag). Note the Cascading Style Sheet (CSS) class of "contents." Omitting the header and the footer bellow, your blog file should now have the following structure.

```html
<div class="contents">
    <main>
        <h2>...</h2>
        <p>...</p>
        <h2>...</h2>
        <figure>
        ...
        </figure>
        <p>...</p>
        <h2>...</h2>
        <p>...</p>
        <table>
        ...
        </table>
    </main>
    <aside>
        <ol>
        ...
        </ol>
    </aside>
</div>
```

1.1. Requirements

These *are not mere suggestions*. If you don't fulfil the list bellow, you will possibly lose all the points.

1) You directory structure, directory names and filenames *must* match the following,

```
http://apollo.occc.edu/user0000/lastname/hw3
├── css
│   └── style.css
├── index.html
└── pages
    ├── about.html
    └── blog.html
```

2) All applicable requirements from the previous assignments should be fulfilled.
3) Your footer text should be 90% of the size of the body text.
4) The `<main>` and `<aside>` elements must be inside a `<div class="contents">` element.
5) The aside tag should be stacked to the right of the main tag. This can be achieved by adding a style of `display: flex;` to the contents class we added the aforementioned division tag to.
6) The aside space should have a 2 pixels wide solid left border of the same colour as your links.
7) The aside space should contain an unordered list of three links namely, *Excerpt*, *Art* and *Food*. All these links will for now point to the same blog page.
8) Add a blog entry about your three favourite local restaurants. These restaurants can not be fast-food chains.

9) This blog entry should contain a table with a header, three rows and two columns. The first column should be the name of the restaurant. The second column should be a link to their menu online and the text of the link should be what you recommend the reader from the restaurant.
10) The table should be properly stylised (e. g., alignment, margins, padding and border) using the appropriate styles for the `<table>`, `<th>` and `<td>` tags.

1.2. Examples

See figure 1 for examples.

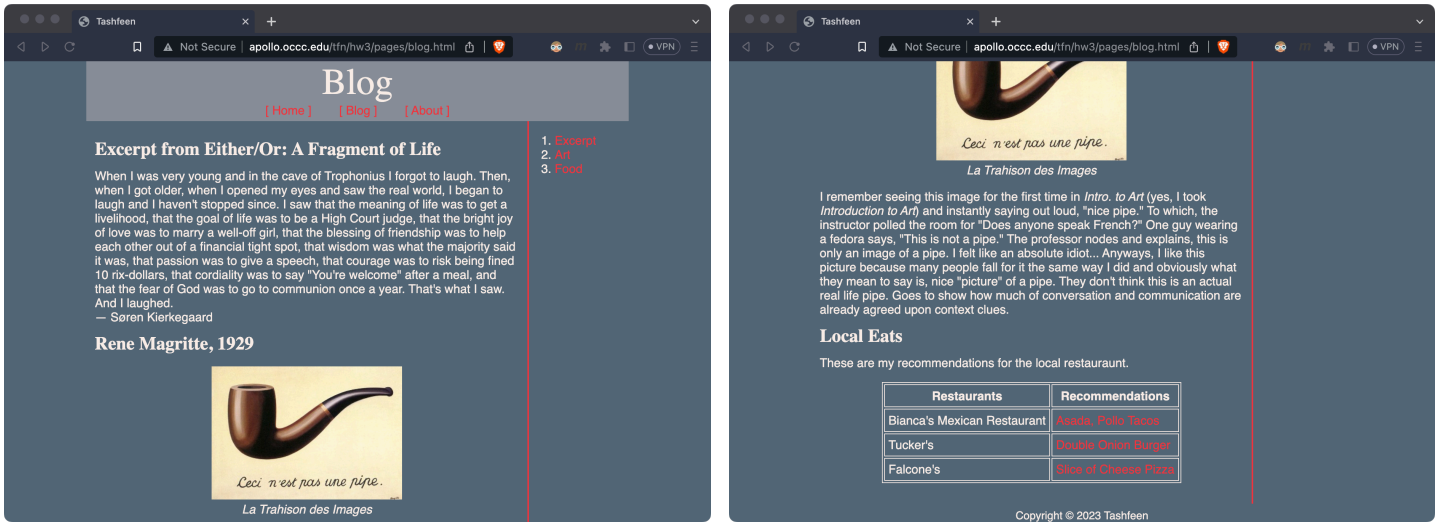

Figure 1. Example at http://apollo.occc.edu/tfn/hw3/pages/blog.html.

1.3. Submission Instructions

Submit a URL of the form `http://apollo.occc.edu/user0000/lastname/hw3/pages/blog.html`, after substituting your last name for `lastname` and your username for the `user0000`. Your URL must open in a new tab. You will lose points otherwise. See submission instructions for homework 1 for help with submitting a link.
